INTRODUCTION

The two tables in this bulletin present 1971 and 1976 Census data for persons 15 years of age and over by age groups and sex, showing the number in the labour force and their labour force participation rates. The first table is for census divisions and the second, for municipalities of 5,000 population and over.

In Tables 1 and 2, census divisions and municipalities experiencing boundary changes, name changes and/or status changes between the 1971 and 1976 Censuses are marked with an asterisk in the table stub. For those places experiencing boundary changes, it was not feasible to reconstruct 1971 labour force data on the new boundaries. As comparisons between 1971 and 1976 labour force data in these cases would not be valid, these cells have been shown as ... (not appropriate or not applicable). For those places experiencing name changes and/or status changes only, the applicable 1971 figures and participation rates are shown. Users wishing 1971 total population counts adjusted to the 1976 boundaries, for affected census divisions or municipalities, should refer to Table 3 (and Introduction) of the appropriate regional report in the Volume 1 series — **Census Divisions and Subdivisions**: Atlantic Provinces (Catalogue No. 92-802); Quebec (Catalogue No. 92-803); Ontario (Catalogue No. 92-804); and Western Provinces and the Territories (Catalogue No. 92-805).

The definition of the labour force was slightly altered between 1971 and 1976, and all data in these tables have been tabulated using the 1971 definition. Thus certain cell values for 1976 may differ from those shown in bulletins containing only 1976 data. The differences between 1971 and 1976 labour force definitions are explained below under "Historical Comparability".

Where applicable, relevant parts of the Census questionnaire and instructions are reproduced in the Introduction to Volume 5 (Catalogue No. 94-800).

DEFINITIONS

Labour Force¹: Refers to the non-inmate² population, 15 years of age and over who, in the week prior to enumeration were (a) employed or (b) unemployed.

(a) The **Employed** consists of persons who, in the week prior to enumeration,

- (i) worked for pay or in their own business, farm or professional practice;

¹ See paragraph on Historical Comparability for changes made to the 1976 definition in order to obtain data for this bulletin.

² An **INMATE** is a resident of a collective household for whom care or custody is being provided, such as persons residing in mental hospitals, homes for the aged, penitentiaries or other institutions.

Les deux tableaux de ce bulletin présentent des données des recensements de 1971 et 1976 sur les personnes âgées de 15 ans et plus, selon le groupe d'âge et le sexe, avec indication du nombre de personnes actives et des taux d'activité. Le premier tableau porte sur les divisions de recensement et le second, sur les municipalités de 5,000 habitants et plus.

Aux tableaux 1 et 2, les divisions de recensement et les municipalités dont les limites, le nom et/ou le statut ont été modifiés entre les recensements de 1971 et de 1976 sont marquées d'un astérisque à la souche du tableau. Il a été impossible de reconstituer les données de 1971 sur la population active pour les divisions de recensement et les municipalités dont les limites ont changé. Comme les comparaisons entre les données de 1971 sur la population active et celles de 1976 sont incorrectes dans ces cas, les cases en question portent la mention ... (n'ayant pas lieu de figurer). Les divisions de recensement et les municipalités dont seul le nom et/ou le statut a changé présentent les chiffres de 1971 et les taux d'activité correspondants. Les utilisateurs désireux de connaître pour les divisions de recensement ou les municipalités en cause les chiffres **totaux** de population de 1971 révisés en fonction des limites de 1976 voudront bien consulter le tableau 3 (et l'introduction) du bulletin de la région en question du volume 1 de la série — **Divisions de recensement et subdivisions**: Provinces de l'Atlantique (n° 92-802 au catalogue); Québec (n° 92-803 au catalogue); Ontario (n° 92-804 au catalogue); et les provinces de l'Ouest et les Territoires (n° 92-805 au catalogue).

La définition du terme "population active" a été légèrement modifiée entre 1971 et 1976, et toutes les données de ces tableaux ont été établies en fonction de la définition de 1971. Par conséquent, les valeurs de certaines cellules pour 1976 peuvent différer de celles indiquées dans les bulletins qui ne présentent que les données de 1976. Les différences qui existent entre la définition de "population active" de 1971 et celle de 1976 sont expliquées ci-après sous la rubrique "Comparabilité chronologique".

Au besoin, certaines parties du questionnaire du recensement et des instructions ont été insérées dans l'Introduction au volume 5 (n° 94-800 au catalogue).

DÉFINITIONS

Population active¹: Comprend tous les non-pensionnaires d'institution² de 15 ans et plus qui, au cours de la semaine précédant le recensement, étaient a) occupés ou b) en chômage.

a) La population active **occupée** se compose des personnes qui, au cours de la semaine précédant le recensement,

- (i) travaillaient contre rémunération ou dans leur propre entreprise ou leur propre exploitation agricole, ou exerçaient une profession à leur compte;

¹ Pour obtenir les données de ce bulletin, voir les modifications apportées à la définition de 1976 au paragraphe "Comparabilité chronologique".

² Un **PENSIONNAIRE D'INSTITUTION** est un résident d'un logement collectif qui reçoit des soins ou qui est en détention, par exemple, les personnes résidant dans un hôpital pour malades mentaux, un foyer pour personnes âgées, un pénitencier ou un autre établissement.

DEFINITIONS — Continued

- (ii) helped without pay in a family business or farm; or
- (iii) had a job from which they were temporarily absent because of illness, vacation, labour dispute at their place of work, training course (provided the job was being held until trainee's return), bad weather, fire, personal reasons, etc.

(b) The **Unemployed** includes persons not classified as employed who, in the week prior to enumeration,

- (i) looked for work and were available to start work. As well, the Census Instruction Booklet asked persons who would have actively looked for work, but did not for certain specific reasons, to answer "yes" to the "looking" question. Those reasons were: temporary illness; indefinite layoff (exceeding 30 days) from a job to which they expected to be called back; or belief that no work was available in their community.
- (ii) were on temporary lay-off, not exceeding 30 days, from a job to which they expected to return (excluding full-time elementary and secondary school students); or
- (iii) had definite arrangements to start a new job at a future date (excluding full-time elementary and secondary school students).

Participation Rate: The percentage the total labour force (employed plus unemployed) forms of the population 15 years of age and over in the area or category.

Age: Age refers to the number of completed years of age at last birthday, and is computed on the basis of the census questionnaire item on date of birth.

Census Division (CD): General term applying to counties, regional districts, regional municipalities, etc. In Newfoundland, Manitoba, Saskatchewan and Alberta, the term describes geostatistical areas that have been created by Statistics Canada in co-operation with the province as an equivalent for counties.

Municipality: Area with corporate status governed by Provincial and Territorial Acts. These acts differ from province to province. Moreover, municipalities within each province vary in name, status, and administrative powers.

Census Subdivision (CSD): General term applying to municipalities, Indian Reserves, unorganized territories and subdivisions. In Newfoundland, Nova Scotia and British Columbia, the term also describes geostatistical areas that have been created by Statistics Canada in co-operation with the province as an equivalent for municipalities. It should be noted that the parts of Flin Flon falling in Manitoba and Saskatchewan, and the parts of Lloydminster falling in Saskatchewan and Alberta are treated as separate CSDs.

Census Subdivision Type: Census subdivisions (CSDs) are classified into various types, according to official designations adopted by provincial or federal authorities. With the exception of unorganized territories and Indian Reserves, the type indicates the municipal status of the CSD. The following list indicates the abbreviations used for the most common CSD types:

DÉFINITIONS — suite

- (ii) travaillaient sans rémunération dans une entreprise familiale ou une exploitation agricole familiale; ou
- (iii) avaient un emploi dont ils étaient temporairement absents à cause d'une maladie, de vacances, d'un conflit du travail à leur lieu de travail, de cours de formation (à la condition que l'emploi soit gardé jusqu'au retour de l'employé), du mauvais temps, d'un incendie, pour des raisons personnelles, etc.

(b) La population active en **chômage** comprend les personnes qui n'étaient pas considérées comme occupées et qui, la semaine précédant le recensement,

- (i) cherchaient du travail et étaient prêtes à travailler. De plus, selon une directive dans le Livret d'instructions, les personnes qui auraient cherché du travail, mais qui ne l'ont pas fait pour certaines raisons, devaient répondre "oui" à la question portant sur la recherche d'un travail. Pouvaient être évoquées les raisons suivantes: temporairement malade; congédiement pour une période indéterminée (plus de 30 jours) d'un emploi auquel elles s'attendaient à être rappelées; certitude de ne pouvoir trouver du travail dans leur localité.
- (ii) étaient en congédiement temporaire, pas plus de 30 jours, d'un emploi auquel elles s'attendaient à être rappelées (ne sont pas inclus les étudiants à plein temps des écoles primaires et secondaires); ou
- (iii) avaient pris des dispositions précises en vue de commencer un nouvel emploi à une date ultérieure (ne sont pas inclus les étudiants à plein temps des écoles primaires et secondaires).

Taux d'activité: Le pourcentage de la population active totale (personnes occupées et personnes en chômage) par rapport à la population de 15 ans et plus dans un secteur ou une catégorie donné.

Âge: L'âge représente le nombre d'années révolues au dernier anniversaire et il est calculé à partir de la date de naissance indiquée sur le questionnaire du recensement.

Division de recensement (DR): Terme générique qui désigne les comtés, les districts régionaux, les municipalités régionales, etc. À Terre-Neuve, au Manitoba, en Saskatchewan et en Alberta, l'expression désigne les unités géostatistiques créées comme équivalent des comtés et délimitées par Statistique Canada en collaboration avec la province.

Municipalité: Territoire constitué en corporation, régi par des lois provinciales et territoriales. Les lois diffèrent d'une province à l'autre. De plus, dans chaque province, les municipalités ont des appellations, des statuts et des pouvoirs administratifs différents.

Subdivision de recensement (SDR): Terme générique désignant les municipalités, les réserves indiennes, les territoires non municipalisés et les subdivisions de recensement. À Terre-Neuve, en Nouvelle-Écosse et en Colombie-Britannique, l'expression désigne également des unités géostatistiques créées comme l'équivalent des municipalités et délimitées par Statistique Canada en collaboration avec la province. Il est à noter que les parties de Flin Flon qui se trouvent au Manitoba et en Saskatchewan, et celles de Lloydminster qui se trouvent en Saskatchewan et en Alberta sont considérées comme des subdivisions de recensement distinctes.

Catégorie de subdivision de recensement: Les subdivisions de recensement sont classées en diverses catégories selon les appellations adoptées par les autorités provinciales ou fédérales. À l'exception des territoires non municipalisés et des réserves indiennes, la catégorie indique le statut d'une subdivision de recensement. Voici la liste des abréviations des catégories de subdivision de recensement les plus courantes:

DÉFINITIONS — fin

HISTORICAL COMPARABILITY

The data in this bulletin are based on the "labour force" concept which was introduced in the 1951 Census and has undergone very little change since. Between 1911 and 1941, the "gainfully occupied" concept was used to produce the census data. The gainfully occupied concept concentrated on a person's past and present occupation rather than on the current economic activity and, while it included persons 10 years old and over prior to 1941 and 14 years old and over in 1941, it omitted other individuals who were active in the labour market.³

Although the labour force concept has been revised only marginally since 1951, the questions asked to produce the data changed markedly from one census to another. In the 1976 Census, the following two questions were added:

"Last week did you have definite arrangements to report to a new job at a future date?"

"Were you available to start work last week?"

The first question was asked of all persons 15 years old and over, although the data as defined after edit excluded full-time elementary and secondary students. The second question was asked only if the person was looking for work.

The figures in this report have been adjusted to compare more directly with the 1971 data than those shown in the non-historical bulletins. The differences between the data in this report and those in the other 1976 reports are as follows:

- (1) Females doing unpaid family work only, related to the head and resident on a farm, are excluded from the employed if their hours of work are less than 20. These females are considered to be not in the labour force.

³ Such as those looking for work for the first time, most females working as unpaid family workers on a part-time basis, and full-time students with part-time jobs who would normally be excluded from the "gainfully occupied". For a detailed discussion of the conceptual differences and adjusted 1911-1941 census data, see *Historical Estimates of the Canadian Labour Force*, Catalogue No. 99-549.

COMPARABILITÉ CHRONOLOGIQUE

Les données présentées ici sont fondées sur le concept de la "population active" qui a été établi aux fins du recensement de 1951 et qui n'a pour ainsi dire pas changé depuis. Entre 1911 et 1941, le concept de "personne travaillant contre rémunération ou en vue d'un bénéfice" était utilisé pour produire les données du recensement. Ce concept se rapportait à la profession antérieure et actuelle de la personne plutôt qu'à l'activité économique courante. Il englobait les personnes âgées de 10 ans et plus avant 1941 et celles de 14 ans et plus à partir de 1941, mais il excluait d'autres personnes qui étaient actives sur le marché du travail³.

Bien que le concept de la population active n'ait subi que de légères modifications depuis 1951, les questions posées pour obtenir les données ont beaucoup changé d'un recensement à l'autre. Dans le recensement de 1976, les deux questions suivantes ont été ajoutées:

"La semaine dernière, existait-il des arrangements définis en vertu desquels vous deviez vous présenter à un nouvel emploi à une date ultérieure?"

"Pouviez-vous commencer à travailler la semaine dernière?"

La première question était posée à toutes les personnes de 15 ans et plus, même si les données établies après vérification excluaient les étudiants à plein temps aux niveaux élémentaire et secondaire. La seconde question n'était posée que si la personne cherchait du travail.

Les chiffres présentés ici ont été redressés de façon qu'on puisse les comparer plus directement avec les données de 1971 que celles figurant dans les bulletins non chronologiques. Voici les différences qui existent entre les données du présent bulletin et celles qui figurent dans les autres publications du recensement de 1976:

- (1) Les femmes qui accomplissent un travail familial non rémunéré seulement, apparentées au chef de ménage et demeurant dans une ferme, ne sont pas comptées parmi les personnes occupées si elles travaillent moins de 20 heures par semaine. Elles sont considérées comme inactives.

³ Comme celles qui cherchaient du travail pour la première fois, la plupart des femmes accomplissant un travail familial non rémunéré à temps partiel et les étudiants à plein temps travaillant à temps partiel qui seraient normalement exclus du nombre de "personnes travaillant contre rémunération ou en vue d'un bénéfice". La publication n° 99-549 au catalogue, intitulée *Relevés chronologiques de la main-d'œuvre canadienne*, présente un exposé détaillé sur les différences conceptuelles et les données de recensement redressées pour 1911-1941.

- (2) Persons looking for work are counted in the unemployed whether or not they had a job from which they were absent as well and whether or not they were available for work.
- (3) Persons indicating they had a new job to start are excluded from the labour force unless they also looked for work or indicated that they were absent.
- (4) Persons on a temporary lay-off were included in the unemployed whether or not they were full-time students.

The data in this bulletin have used the 1971 definitions as far as possible. In identifying the female unpaid family workers in 1976, those related to the head and resident on a farm were deleted while, in 1971, these females were identified using the occupation data. The inclusion of the new job and availability questions and the different order in which the questions appeared in the census questionnaire might have affected the answers. However, it is not possible to assess fully their impact on the data.

Further discussions on the differences between the 1971 and 1976 Census labour force data are available in the **Introduction to Volume 5** (Catalogue No. 94-800), and the **Evaluation Report on the 1976 Census Labour Force Characteristics**. The latter report contains also a detailed explanation on the comparability of the 1976 Census and the monthly Labour Force Survey data.

SAMPLING AND WEIGHTING

The information in this report was collected on a 33 1/3% sample basis and weighted to population totals. As a result, the population for a given geographic area may differ from that shown in reports containing data collected on a 100% basis. The latter figures, of course, represent the official count of the population (see Catalogue No. 92-823). All table headings are noted as to the basis on which data were collected. Information on sampling and weighting systems can be found in a study entitled "Quality of Data, 1976 Census, Series I: Sources of Error - The Effect of Sampling and Weighting on Data Quality".

CONFIDENTIALITY AND RANDOM ROUNDING

The figures shown in this report have been subjected to a confidentiality procedure known as "random rounding" to prevent the possibility of associating small figures with any identifiable individual. Under this method, all figures including totals are randomly rounded (either up or down) to a multiple of "5". This technique provides strong protection against direct, residual or negative disclosures without adding significant error to the census data. However, since totals are independently rounded they do not necessarily equal the sum of individual rounded figures in distributions. Also, minor differences can be expected for corresponding totals and cell values in various census reports. Similarly, percentages, which are calculated on rounded figures, do not necessarily add to the total. Percentage distributions and rates for the most part are based on rounded data, while percentage changes and averages are based on unrounded data. Users are advised that each table is noted accordingly. Additional details on the random rounding technique may be obtained by writing Census Information Services (see back cover).

- (2) Les personnes qui cherchent du travail sont comptées parmi les chômeurs, qu'elles aient ou non occupé un emploi dont elles se sont absentes, et qu'elles aient ou non été prêtes à travailler.
- (3) Les personnes déclarant qu'elles ont un nouvel emploi devant commencer à une date ultérieure ne sont pas comptées dans la population active, à moins qu'elles n'aient également cherché du travail ou qu'elles n'aient indiqué qu'elles se sont absentes de leur travail.
- (4) Les personnes mises à pied temporairement sont comptées parmi les chômeurs, qu'elles soient ou non des étudiants à plein temps.

Aux fins des données présentées ici, les définitions de 1971 ont été utilisées dans la mesure du possible. Toutefois, en 1976, les femmes qui étaient apparentées au chef de ménage et qui demeuraient dans une ferme n'ont pas été incluses dans la catégorie des travailleurs non rémunérés vu l'absence de données sur la profession qui, en 1971, ont servi à les identifier. Le fait qu'on ait ajouté des questions sur un nouvel emploi et sur la disponibilité dans le questionnaire du recensement et l'ordre dans lequel elles figuraient peuvent avoir influencé les réponses. Mais il est impossible d'évaluer avec précision les répercussions que cela a pu avoir sur les données.

Vous pouvez obtenir de plus amples renseignements sur les différences qui existent entre les données sur la population active du recensement de 1971 et celles du recensement de 1976 en consultant l'**Introduction au volume 5** (n° 94-800 au catalogue) et le **Rapport d'évaluation des caractéristiques de la population active au recensement de 1976**. Ce dernier rapport contient également une explication détaillée sur la comparabilité des données du recensement de 1976 et celles de l'Enquête mensuelle sur la population active.

ÉCHANTILLONNAGE ET PONDÉRATION

Les renseignements de la présente publication ont été recueillis à partir d'un échantillon de 33 1/3 % et pondérés en fonction des chiffres totaux de la population. Il s'ensuit que le chiffre de la population pour une région géographique donnée n'est pas forcément le même que celui des publications dont les données avaient été recueillies à 100 %. Bien entendu, c'est ce dernier chiffre qui représente le chiffre officiel de la population (voir la publication n° 92-823 au catalogue). Tous les titres des tableaux contiennent une note précisant la base de la collecte des données. Des renseignements concernant les systèmes d'échantillonnage et de pondération figurent dans une étude intitulée: "Qualité des données, recensement de 1976, Série I: Les effets de l'échantillonnage et de la pondération sur la qualité des données".

CONFIDENTIALITÉ ET ARRONDISSEMENT ALÉATOIRE

Par souci de confidentialité, les chiffres présentés ici ont été soumis à une formule appelée "arrondissement aléatoire" qui interdit la possibilité d'associer des chiffres de faible importance à une personne reconnaissable. Grâce à cette méthode, tous les chiffres, y compris les totaux, sont arrondis de façon aléatoire (vers le haut ou vers le bas) à un multiple de "5". Cette technique assure une bonne protection contre la divulgation directe, négative ou par recoupements, sans ajouter d'erreur significative aux données. Toutefois, puisque les totaux sont arrondis séparément, ils ne sont pas nécessairement égaux à la somme des chiffres individuels arrondis dans les distributions. De plus, il faut s'attendre que les totaux et les autres chiffres correspondants dans divers bulletins du recensement présentent quelques légères différences. De même, la somme des pourcentages qui sont calculés à partir des chiffres arrondis ne correspond pas forcément au total. La plupart des répartitions en pourcentage et des taux sont basés sur des données arrondies, alors que les variations en pourcentage et les moyennes sont fondées sur des données non arrondies. Les utilisateurs sont priés de remarquer que chaque tableau est annoté en conséquence. On peut obtenir plus de détails sur l'arrondissement aléatoire en s'adressant à l'Information recensement (voir la couverture arrière).

BASIC MEASURES OF DATA QUALITY

Coverage Error

A coverage error occurs in the census whenever a person or a household is missed completely or counted more than once. Since overcoverage is fairly rare in relation to undercoverage, the net effect of such errors is to introduce a downward bias in census figures, so that the published census estimates tend to underestimate the actual population.

A special study was undertaken in relation to the 1976 Census to measure the extent of the bias due to undercoverage. This study estimated the over-all undercoverage rate to be of the order of 2% of the total population.

Evidence from studies of coverage errors in earlier censuses indicates that undercoverage is not evenly distributed throughout the population but tends to be higher in certain segments of the population, e.g., young male adults, recent immigrants.

Further details on this study may be obtained by contacting Census Information Services (see back cover).

Response Rates

The table below presents the response rates obtained in the 1976 Census for the stated characteristics. A response rate is defined as the number of times the value of the characteristic was obtained divided by the number of times it should have been obtained.

These response rates are published in order to give an indication, for each characteristic, of the proportion of cases which required imputation for non-response.

MESURES DE BASE DE LA QUALITÉ DES DONNÉES

Erreur de couverture

Une erreur de couverture se glisse chaque fois qu'une personne ou un ménage sont omis ou comptés plus d'une fois. Étant donné que le surdénombrement est assez rare par rapport au sous-dénombrement, les erreurs de couverture introduisent un biais vers le bas dans les estimations du recensement de sorte que ces dernières ont tendance à sous-représenter la population réelle.

On a mené une étude spéciale concernant le recensement de 1976 afin de mesurer l'importance des biais attribuables au sous-dénombrement. On a estimé que le taux global du sous-dénombrement représentait 2 % de la population totale.

Des études d'erreurs de couverture effectuées à l'occasion de recensements antérieurs ont révélé que le taux de sous-dénombrement n'était pas également réparti dans toute la population, mais qu'il avait tendance à être plus élevé pour certains segments de la population, par exemple, chez les jeunes adultes de sexe masculin et les nouveaux immigrants.

On peut obtenir de plus amples renseignements sur cette étude en communiquant avec Information recensement (voir la couverture arrière).

Taux de réponse

Le tableau ci-dessous présente les taux de réponse obtenus lors du recensement de 1976 relativement aux caractéristiques citées. Le taux de réponse est égal au quotient du nombre de fois que la valeur de la caractéristique a été obtenue par le nombre de fois qu'on aurait dû l'obtenir.

Ces taux de réponse sont publiés afin d'indiquer, pour chaque caractéristique, le pourcentage de cas qui ont dû être imputés en raison de la non-réponse.

RESPONSE RATES FOR SELECTED CENSUS CHARACTERISTICS, 1976

TAUX DE RÉPONSE POUR CERTAINES CARACTÉRISTIQUES DU RECENSEMENT, 1976

Characteristics — Caractéristiques	Response rate (%) — Taux de réponse (%)
Age — Âge.....	98.4
Labour force activity — Activité.....	96.0
Sex — Sexe.....	98.6

BASIC MEASURES OF DATA QUALITY — Continued

Total Standard Error

The measures of reliability given in the table below are estimates of the total standard error (TSE) of the published 1976 Census figures. These include the effects of sampling (where applicable) as well as the random or non-systematic components of response and processing errors. The total standard errors, however, do not include allowances for systematic errors such as coverage errors, biases due to similar misinterpretations of concepts by many respondents, or systematic processing errors. These estimates of reliability are published to give an indication of the level of error only and are not meant for use in hypothesis testing or detailed analysis.

MESURES DE BASE DE LA QUALITÉ DES DONNÉES — suite

Erreur type totale

Les mesures de fiabilité du tableau ci-dessous constituent des estimations de l'erreur type totale (ETT) des chiffres publiés du recensement de 1976. L'erreur type totale englobe les effets de l'échantillonnage (s'il y a lieu) ainsi que les composantes aléatoires et non systématiques des erreurs de réponse et de dépouillement. Cependant, l'erreur type totale ne comprend pas les erreurs systématiques telles que les erreurs de couverture, les biais découlant d'une mauvaise compréhension des concepts par plusieurs recensés et les erreurs systématiques de dépouillement. Ces estimations de fiabilité sont présentées uniquement pour donner une indication du niveau d'erreur dans les chiffres du recensement et ne doivent pas être utilisées pour faire des tests d'hypothèses ou effectuer une analyse détaillée.

¹ These correspond to the reliability measures that were presented as root mean square errors or reliability estimates in the 1971 Census publications. — Ces estimations correspondent aux mesures de fiabilité présentées comme écarts quadratiques moyens ou estimations de fiabilité dans les publications du recensement de 1971.

BASIC MEASURES OF DATA QUALITY – Concluded

Users wishing to obtain TSE estimates for a given cell of data in any table in the Volume Series should follow these procedures:

1. Determine if the table is based on the complete census or on the one-third sample.
2. Determine the categories defining the cell. In some cases, this may be just a single category (e.g., age 25-29), while for a cell in a cross-classification involving several variables, there may be several categories (e.g., married males aged 25-29).
3. Referring to the TSE table locate the cell-defining category which presents the highest value. Any column can be used for this comparison. For those categories where both 100% and sample TSE values are shown, use only the 100% rows for tables based on the complete census and only the sample rows for tables based on the one-third sample (see step 1).
4. Choose the column in the TSE table whose heading is closest to the value of the given cell in the census table. Approximations for intermediate values may be achieved by linear interpolation.
5. Read off the figure from the row (determined in step 3) and column (determined in step 4) of the TSE table.

When using these figures, the user can be reasonably certain that, for the enumerated population, the true value (discounting systematic and coverage errors) lies within plus or minus twice the total standard error (e.g., for a figure of 100 with a hypothetical TSE of 3, the range would be 100 ± 6) and virtually certain that it lies within plus or minus three times the total standard error (e.g., for the same figure of 100 with a hypothetical TSE of 3, the range would be 100 ± 9).

SYMBOLS

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.

MESURES DE BASE DE LA QUALITÉ DES DONNÉES – fin

Les lecteurs qui veulent calculer des estimations de l'ETT pour une case donnée d'un tableau quelconque de cette série devront procéder de la façon suivante:

1. Déterminer si le tableau est fondé sur le recensement exhaustif ou sur l'échantillon partiel (un tiers).
2. Déterminer les catégories qui définissent la case. Dans certains cas, il peut n'y avoir qu'une seule catégorie (par exemple, les 25-29 ans), tandis que dans le cas des classements recoupés mettant en jeu plusieurs variables, il peut y en avoir plusieurs (par exemple, les hommes mariés âgés de 25 à 29 ans).
3. En consultant le tableau des ETT, situer la catégorie qui a la valeur la plus élevée. N'importe quelle colonne peut servir à cette comparaison. Dans le cas des catégories pour lesquelles sont indiquées les valeurs de l'ETT à la fois pour le recensement exhaustif et pour l'échantillon, utiliser uniquement les lignes du recensement pour les tableaux fondés sur le recensement exhaustif, et uniquement les lignes de l'échantillon pour les tableaux fondés sur l'échantillon d'un tiers des ménages (voir l'étape 1).
4. Dans le tableau des ETT, choisir la colonne dont l'en-tête se rapproche le plus de celle de la case donnée dans le tableau du recensement. Les approximations des valeurs intermédiaires peuvent être effectuées par interpolation linéaire.
5. Lire la valeur correspondant à la ligne (déterminée à l'étape 3) et à la colonne (déterminée à l'étape 4) du tableau des ETT.

L'utilisateur de ces chiffres peut être raisonnablement certain que, pour la population recensée, la vraie valeur (en faisant abstraction des erreurs systématiques et de couverture) se situe dans un intervalle de plus ou moins deux fois l'erreur type totale (par exemple, pour le chiffre 100 et une ETT hypothétique de 3, l'intervalle serait de 100 ± 6). L'utilisateur peut être presque certain que cette valeur se situe dans un intervalle de plus ou moins trois fois l'erreur type totale (par exemple, pour le chiffre 100 et une ETT hypothétique de 3, l'intervalle serait de 100 ± 9).

SIGNES CONVENTIONNELS

- .. non disponible.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- infimes.

Publications of the 1976 Census of Canada

This bulletin is one of a series of volume reports of the 1976 Censuses of Population, Housing and Agriculture.

Most of the bulletins in the regular Volume Series are data-oriented. Other reports containing more methodological, interpretative and evaluative content, are also issued. These are as follows:¹

- (a) 1976 Census Administrative Report
- (b) 1976 Census Quality of Data Series
- (c) 1976 Census Research Series
- (d) Introductory Reports to each of the regular Volume Series.

Also available on request is a series of Reference Lists developed largely for internal verification of basic geographical and population hierarchies, which could provide useful information to the outside user.

Users will note that the majority of census publications are colour-coded to identify with the four themes central to the presentation and to maintain comparability with the 1971 series, e.g., blue for Geographical and Demographic content, brown for Housing, Household and Family data, red for Economic Characteristics and gold for the series based on Agriculture.

These reports are listed in the *1976 Census Catalogue* which can be obtained free of charge from:

Publications Distribution,
Room 1200, Statistics Canada,
Ottawa, Ontario.
K1A 0T6

To order **census publications**, send a cheque or money order made payable to the Receiver General for Canada, to the above address.

In addition to published documents, the Census of Canada can provide **other products and services** about census: data on microform (film or fiche), computer tapes, computer print-outs, user-specified tables, maps, geographic files, geographic lists, etc.

For information write:

Census Information Services,
Statistics Canada,
Ottawa, Ontario.
K1A 0T7

or call (613) 996-5254.

Inquiries about census and other **Statistics Canada information** can also be directed to Statistics Canada Regional Offices located in: St. John's (Nfld.), Halifax, Montréal, Ottawa, Toronto, Winnipeg, Regina, Edmonton and Vancouver.

¹ It should be noted that these publications are generally released somewhat later than the data reports.

Publications du recensement du Canada de 1976

Ce bulletin fait partie de la série des publications des recensements de 1976 de la population, du logement et de l'agriculture.

La plupart des bulletins de la série ordinaire des volumes présentent des données. On publie également d'autres bulletins dont le contenu vise plutôt la méthodologie, l'interprétation et l'évaluation. Ces bulletins sont les suivants¹:

- a) Rapport administratif du recensement de 1976
- b) Série relative à la qualité des données du recensement de 1976
- c) Série du recensement de 1976 relative à la recherche
- d) Introductions à chacune des séries ordinaires des volumes.

Vous pouvez aussi vous procurer sur demande une série de Listes de référence, servant surtout à la vérification interne des catégories géographiques et démographiques de base, qui pourraient fournir des renseignements utiles aux utilisateurs à l'extérieur de Statistique Canada.

Les utilisateurs constateront que la plupart des publications du recensement sont classées par couleur, chaque couleur correspondant à l'un des quatre thèmes du recensement; cela permet d'assurer la comparabilité avec les séries de 1971; ainsi, le bleu est réservé aux publications de nature géographique et démographique, le brun, aux bulletins sur le logement, les ménages et les familles, le rouge, aux publications de nature économique et la couleur or, à la série relative à l'agriculture.

Ces bulletins figurent au *Catalogue du recensement de 1976* que vous pouvez obtenir gratuitement auprès de:

Distribution des publications
Pièce 1200, Statistique Canada
Ottawa (Ontario)
K1A 0T6

Envoyez vos commandes de **publications du recensement** à cette même adresse en y joignant un chèque ou un mandat postal à l'ordre du Receveur général du Canada.

Outre les publications, le Recensement du Canada offre divers **autres produits et services**: données en microcopie (film ou fiche), bandes pour ordinateurs, états mécanographiés, totalisations spéciales, cartes, fichiers et listes géographiques, etc.

Pour obtenir des renseignements, écrivez à:

Information recensement
Statistique Canada
Ottawa (Ontario)
K1A 0T7

ou téléphonez au numéro (613) 996-5254.

Toute **demande de renseignement** sur le recensement et les autres **données de Statistique Canada** peut également être transmise aux bureaux régionaux de Statistique Canada situés à St. John's (T.-N.), Halifax, Montréal, Ottawa, Toronto, Winnipeg, Regina, Edmonton et Vancouver.

¹ Il convient de remarquer que ces bulletins sont généralement publiés quelque temps après les bulletins présentant des données.
